

# THE HARM OF IMPROPER DISPOSAL

**DON'T** dump, flush, or leave your unwanted or expired prescription medications in your medicine cabinet. Flushed medication enters our watershed, which can harm fish and other wildlife. Medication that ends up in the landfill can also seep into groundwater.

Any drugs left at home pose grave and unnecessary dangers to family members. This harms children especially, and may result in substance abuse.

Please dispose of your medications properly by dropping them off at a designated drop-off location.
